

Abstract

The Links Tab provides a single area within Salesforce where users can access business critical information and relevant documents, reports, external websites, intranets, etc.

Description

Allow Salesforce Users to quickly access any number of important links from a single tab. Drive adoption by connecting your users with the information they need for their jobs from right inside Salesforce. Save on custom tabs because the Links tab can be used as a single source for access to many items.

The Links Tab enables a logical organization of links based on categories which can be tailored to groups of Salesforce Users based on Profile. This capability allows for categories and links to be tailored to specific users based on business requirements.

There's no need to worry about subscription fees when you enable the Links tab. Pricing is based on the organization not the Users and is a one-time flat fee for the currently available version.

* NOTE: API access must be enabled for Professional Edition orgs.

Features & Benefits

- Drive adoption by connecting your users with the information they need for their jobs from right inside Salesforce.
- Display only links that are relevant to your users. The functionality utilizes Profiles to allow you to organize and display links that are relevant to specific User groups.
- Eliminate the need for miscellaneous Salesforce tabs. Make data accessible to users without impacting the number of available tabs.
- Provide easy access to Visualforce pages or other custom developments for your technical team while keeping the code "invisible" to general users.

Requirements

Salesforce.com Edition

Unlimited, Enterprise, & Developer

Specifications

Publisher	Interactive Ties LLC
Type	Native
